

MAP..

YOUR MAP IDENTIFIES
YOUR ORGANISATION'S
MOST SIGNIFICANT
SUSTAINABILITY IMPACTS.

Materiality Assessment Process...

Your MAP® outcomes can be used to identify topics to include in your sustainability report. The outcomes can be used to shape your sustainability strategy and improve your sustainability performance year on year. We can conduct an impact materiality assessment (single-materiality), or build on the MAP outcomes to undertake a double-materiality assessment. We customise the MAP specifically for your organisation.

Through your MAP we:

IDENTIFY the sustainability topics that your stakeholder groups believe are most at risk if your organisation fails to manage them

DISCOVER the areas in your business that your stakeholder groups believe your organisation can create the most opportunity

MEASURE stakeholder perception of your organisation's sustainability performance

PROVIDE a robust quantitative and qualitative analysis of performance that can inform your sustainability strategy

CONDUCT a weighted gap analysis of perceived performance against significance, allowing you to pinpoint the areas that are most falling short of stakeholder expectations

PREPARE you for sustainability reporting by identifying your most significant impacts

INFORM you what may or may not be working in your internal and external sustainability programs, communication and strategy

SAVE you time and money when approaching your materiality assessment

MAP CORE	YOUR MAP OPTIONS	MAP COMPREHENSIVE
✓	CUSTOMISED ONLINE SURVEY	✓
✓	STAKEHOLDER INTERVIEWS	✓
	CUSTOMISED IN-HOUSE DOUBLE-MATERIALITY WORKSHOP	✓

The MAP Core option delivers a detailed report with findings for sustainability strategy and reporting. Choose our MAP Comprehensive option, and the findings from your impact assessment will form the basis of a double-materiality workshop. This final step determines the financial effects of your material sustainability impacts.
